Tyler Walters

Director of Data Platform Engineering at Claritas Rx
Portland, Oregon, United States

Summary

Cloud Architect with over 20 years of expertise in designing, scoping, estimating, delivering and operating custom software and hardware solutions. A customer-obsessed technical generalist with demonstrated success in delivering high-impact results at companies ranging from seed-funded start-up to Fortune 50 leader. A continuous learner and thought leader with both deep expertise in industry foundations and the curiosity to experiment with leading-edge technologies. An approachable, hands-on technical leader who seeks diverse perspectives, generously supports and develops others, and understands the importance of being an emotionally-intelligent coach, peer, and mentor.

Specialized in the following areas:

Software Architecture

Large-Scale Services on AWS

Confident Communicator

Cloud Native Applications

Security & Data Privacy

Public Speaker & Presenter

Custom App Development

Event-Driven Architecture

Cross-Functional Collaborator

CI/CD Pipelines & DevOps

Ops Metrics/Dashboards/Alarms

Trainer & Mentor

Serverless & Microservices

Roadmap Planning

AWS-Certified (4)

Experience

Claritas Rx

2 years 4 months

Director of Data Platform Engineering

November 2024 - Present (1 year 6 months)

Portland, Oregon, United States

Leading a team of software and data engineers to build Claritas Rx Ascend 2.0: a cloud-based data intake, ingestion, transformation, analytics & AI platform.

Principal Architect

January 2024 - November 2024 (11 months)

San Francisco Bay Area

Led architecture and tooling improvement initiatives to transform a data services provider into a Software as a Service product company.

- Split time 40/60 between making opportunistic improvements to the existing legacy system / building a new data platform replacement.
- Launched an internal Self Service application, and external Ascend 2.0 web application using cloud-based services and 65% offshore resources.
- Introduced a SDLC and CI/CD to accelerate the delivery of infrastructure, services and UIs to upper environments to shorten the feedback cycle.
- Improved AWS Account Governance by implementing Organizations, Control Tower and a process to empower developers to innovate personal sandboxes.
- Configured internal cross-account networking, VPN, authentication and monitoring dashboards with SOP runbooks.
- Introduced data classification tagging to help teams better align with NIST/ HIPAA/SOC2 guidance while improving access & productivity.
- Adopted Glue Data Catalog and ETL tooling to transform data using PySpark jobs and notebooks.

Roar Social

Backend Software Architect

July 2022 - January 2024 (1 year 7 months)

Los Angeles - New York - San Francisco

Responsible for defining App-to-API interactions, architecture design and leading implementation of backend services and a team of 25 software engineers. Transformed a POC demo app to a secure, scalable and observable production-ready app in 9 months. Iteratively delivered a multi-feed video discovery and streaming application, donation flow and administration system through the full SDLC. Enhanced performance and load tested content delivery APIs at 100K TPS at <50ms avg latency. Personally implemented critical components and reference examples, including:

- **Personalized Feed Generation:** Created an event-driven process to manage personal sets of content users have seen, viewed and interacted with on the system and ensure that blocked content is never seen again, duplicates are avoided and friend, follower and highly-scored content items are promoted.
- **Operational Excellence:** Led a program to ensure successful service operations using dashboards & metrics, runbooks, on-call shifts and an auto-generated ticketing system to quickly react to system metric anomalies and log errors.
- **Content Decoration:** Deployed a just-in-time metadata decorator for each content ID in a user's feed so that the stats were always fresh and personalized to show if/how a user interacted with a content item.
- **Admin UI:** Created internal tools to help visualize the state of each user's feed and how they see a decorated content item.
- **Content Discovery System:** Designed BFF and interaction between client and backend and implemented the APIs and data storage & caching systems.
- **High Performance:** Solved serverless performance issues by migrating key lambdas to a containerized NestJS service deployed to AWS Fargate. Also improved the developer experience by using containers for local development.
- **Daily Leadership:** Unblocked implementation escalations, PR Reviews, Pipeline health, Deployments, Jira Task creation & grooming, Eng task QA, product planning & estimation, & hiring support

Amazon

Software Development Engineer

March 2020 - July 2022 (2 years 5 months)

Portland, Oregon, United States

Selling Partner Services (<https://sellercentral.amazon.com>)

Managed 1.6 TB of 3rd-party Seller inventory data, continuously updated via events ingested from 14 high-volume sources and indexed into searchable and aggregated formats in a highly distributed and available data store.

- Led a campaign to modernize 160+ data clients across 90 teams through close coordination and automated status reporting.
- Scaled a data routing service to comfortably handle 340K TPS at 50ms latency using Go and ECS Fargate auto-scaling.
- Used metric data to drive service improvements that led to a 30% reduction in high-severity tickets.

AWS Training & Certification (<https://www.aws.training>)

Responsible for the course catalog, survey and certification systems used to teach students and aspiring IT professionals how to use the AWS cloud in a variety of use case applications and become certified.

- Defined a roadmap for modernizing and scaling a C# monolith by replacing key workloads and APIs with microservices.
- Improved the Course Search UX, accuracy and performance by ingesting data into OpenSearch schemas.
- Scaled the LMS and dependent services prior to the annual re:Invent conference to handle up to 50K TPS.
- Owned department-level campaign to comply with EU cookie consent across all AWS-owned web properties in training.
- Worked with 3rd parties Qualtrics and Certmetrics to reduce the number of downstream outages that impacted customers.

Amazon Web Services (AWS)

Cloud Application Architect

January 2018 - March 2020 (2 years 3 months)

Portland, Oregon Area

Provided consulting & professional services to help customers implement solutions powered by AWS. Grew the practice by giving interviews, mentoring new hires and creating delivery reference materials and tech presentations. Certified AWS Speaker. Led a mix of AWS and client staff to build and operate cloud-native applications for 3 to 9 month engagements:

- Whole Foods Market eStore: Re-implemented the online catering ordering website, 'eStore' on AWS, compliant with internal Amazon best practices and integrated with internal Amazon systems after the Amazon acquisition of WF. Responsible for doing the initial assessment, overall design and leading the team to successfully implement an accelerated 9-month timeline.
- DoorDash Deployment Modernization: Replaced 3rd-party cloud deployment tooling and integrated Jenkins with AWS CodeDeploy on ECS for canary deployments, faster rollbacks and multi-region support.
- [Confidential Client] Drive-Through Automation R&D: Worked between AWS Lex and Data Science teams building a POC voice service for augmenting the drive-through experience. Responsible for building and operating a custom voice-UI integration testing framework and a pipeline that automated ingestion of audio utterances to create test data. The test platform was used as part of a feedback loop while training ML models.
- Portland General Electric: Implemented AWS Landing Zone and IAM SSO to help bridge legacy datacenter with a multi-account cloud usage strategy.

- Alexa Music Skills, Developer Experience Team: Helped deliver self-service music skill creation capability to Alexa, including support for the Apple Music provider launch, radio stations and music expansion into LatAm, EU and Asian marketplaces. Designed and implemented music skill metadata store and customer-specific music skill retrieval APIs.

Nike

Tech Lead

October 2016 - January 2018 (1 year 4 months)

Portland, Oregon Area

Joined Nike to intake an agency-created retail experience POC and create a team to secure, standardize and scale the system to US, Europe and China retail locations.

- The Trial Zone team supports digitally enhanced running and basketball experiences in 8 flagship Nike retail locations.
- Implemented CI/CD to maintain a fleet of on-site servers with sensors and a set of cloud-based services and tooling to support them.
- Refactored Unity3D games to have configurable assets to support product and venue-specific experiences.
- Planning the next tier of the scaling to more locations while looking to expand features, ROI monitoring, product integration and add more virtual experience venues.

Slalom

6 years 7 months

Solution Principal

August 2014 - October 2016 (2 years 3 months)

Greater Chicago Area

Managed a team of 9 SDE consultants, co-founded a DevOps focused delivery practice and led client delivery of custom and cloud-native applications for enterprise projects, including:

Echo Global Logistics • Integrated an acquired stack of IT services using IaC approaches, Chef, .NET, Hyper-V, Azure, TerraForm and DataDog.

Western Governors University • Designed a Data CI pipeline for defining data as code using Liquibase (Datical), Chef, Vagrant and Jenkins.

Qlik Technologies • Lead architect and initial operations of QlikCloud.com, providing Qlik SaaS. Automated and/or designed the operational processes

and transitioned ownership to a new Qlik Cloud department. Delivered a global and elastic system using MEAN stack for front-end; AWS, Puppet, Consul, New Relic, BlazeMeter & SauceLabs.

Solution Architect

July 2013 - August 2014 (1 year 2 months)

Consultant for enterprise clients nationally, based out of the Chicago office. Member of the leadership team, people manager and solutions architect for client projects. Client projects included:

Pepsi • Supported analysis of vending machine metrics by defining Talend, RDS and Tableau servers as code using CloudFormation on AWS.

Law Bulletin • Transformed legal docket management system from on-premise Oracle/Liferay/Solr/Jasper stack to AWS. Led the cloud vendor selection process and demonstrated better consistency, agility and sprint velocity using Puppet, CloudFormation & CI/CD.

Walgreens • Architect of a time-sensitive data de-identification process to meet compliance deadlines and avoid disruption of reporting services.

Blue Cross Blue Shield of Michigan • First engineer on a new member portal for insurance members to manage accounts and claims. Scaled team to 22 developers by automating environment setup using RedHat/WebSphere/Oracle and an IaC & CI/CD approach to delivery. Used Backbonejs, Java Spring, Liquibase for MySQL/Oracle, CloudFormation & Puppet.

Consultant

April 2010 - July 2013 (3 years 4 months)

Greater Chicago Area

Business and technical consultant for enterprise clients based in Portland, Chicago and remote. Client projects included:

Providence Health & Services • Founded Healthcare Intelligence unit for applying BI principles, tooling and governance to operational and research data marts. Defined roles, processes and delivered analysis support for bundled knee operations and stroke services using MSBI and Tableau.

Standard Insurance • Introduced Microsoft BI stack (MSBI) and converted a set of underwriting reports migrated from Cognos. Defined servers partially

as code and documented manual customization processes. Created center of excellence to define security, governance and training plan.

Russell Investments • Created Salesforce app to assess which accounts to invest relationship management in, and a dashboard view for users.

CorVel Software • Created a form generation and workflow application to automate the on-boarding of each of their new clients using C# .NET.

Hitachi Consulting

Senior Consultant

August 2006 - April 2010 (3 years 9 months)

Technical consultant for enterprise clients based in Portland and remote.

Project engagements included:

Waste Management • Upgraded, optimized, re-designed and integrated Greenopolis.com site to ThinkGreenRewards.WM.com, and added a portal interface to provide the UI for recycling kiosks. Automated environment cloning of the Drupal LAMP stack using Drush and bash.

Nike • Used an IaC approach to defining a Vendor Management workflow system using SharePoint site templates, custom C# web parts and scripts.

Microsoft • Prepared hands-on data visualization workshop examples and authored 2 Green IT white paper articles for VisioToolbox.com in preparation for a Green IT conference. Mocked out HVAC sensor data generation, harvested in MySQL and bound to Visio to visualize data center temps.

Johnstone Supply • Enhanced data-driven marketing decisions and automated price setting for retail locations. Implemented MSBI stacks and configured daily intake, processing and analysis of retail store sales, costs and inventory CSVs using SSIS, SSAS and SSRS. Developed price setting UI to support region-specific campaigns based on predictive values.

Cascade Corporation • Customized reports and tooling machine code to stamp load bearing data on forklift attachments to meet new regulations.

Columbia Sportswear • Updated corporate social responsibility app that enabled inspectors to remote factory locations offline, then automatically

synchronize data when they come back online. Used C# .NET and XML-based data storage.

Knowledge Learning Corporation • Created kiosk time-clock software to allow parents and teachers to check children in/out, and administration UI for compliance, performance and financial reporting using Java Struts and Oracle. Developed set of reports to assess marketing campaign effectiveness.

WitMatix.com Inc.

Founder & Web Developer

September 2004 - August 2006 (2 years)

Started a web development and online services company while in college and managed a team of local students and freelance contractors to create online presences and e-commerce systems for small business clients. Proposed, sold, designed, developed and managed project relations between my development group, 3rd-party designers, and clients. Client projects included:

- HeadTracker.com: Sold IR head tracking hardware to gamers and people with physical disabilities.
- SunRoseSheep.com: Informational website for a sheep farm and wool supplier.
- GetFlossin.com: Website, SEO, Advertisement landing page and contact form for coloring books for dental offices.
- BerkshireTownhomes.com: Website and contact form for apartment rentals.
- BuyGoodMusic.com: Online marketplace for independent music artists.
- TheChristianQuarter.com: Online dating service serving people who follow the Christian faith. Included a Java-based IM.
- RoachWear.biz Screen Printing: E-commerce store to sell custom printed shirts, hats and clothing.
- MottoRX.com Pharmacy: An e-commerce store selling products from a Canada-based pharmacy.
- RendezvousPCs.com: E-commerce store to sell PCs and related accessories.
- Supported other miscellaneous small website, hosting and domain name registration customers.

PEAK Internet

Software Engineer

June 2003 - September 2004 (1 year 4 months)

Software development engineer for an Internet Services Provider (ISP) responsible for implementing online payments and a UX and backend for self-service billing and account management.

- Coordinated input from marketing, billing and IT departments to create initial mockups and the final implementation.
- Integrated with the 3rd party credit card payment system and handled customer data securely.
- Provided advanced support services for hosting and web customers.
- Built and racked physical servers and configured them in the ISP data center.
- Technologies: PHP, MySQL, Apache, Linux, HTML, XML, JavaScript, LDAP

Business Solutions Group

Developer

March 2003 - June 2003 (4 months)

Analyzed and tested network hardware and software for Hewlett-Packard.

- Performed testing and network traffic analysis on network hardware
- Tested software interfaces to beta switches and hubs for usability and functionality
- Technologies: C#, .NET, HTML, DHCP, TCP/IP Networking

Naval Air Warfare Center Training Systems Division (NAWCTSD)

Research IT Developer

June 2002 - August 2002 (3 months)

Advanced Distance Learning (ADL) is a government initiative involving universities and the US Navy with a mission to standardize and distribute military training material.

- Installed & deployed Linux servers to host a course validation service built on the LAMP platform.
- Wrote an online survey program to collect feedback from course creators.
- Created an online catalog to organize and browse ADL Guidelines.
- Worked with senior research professors and a Navy liaison on Advanced Distance Learning projects.
- Technologies: PHP, Apache, MySQL, Linux, HTML, JavaScript, XML, Java

Corvallis Microtechnology

SysAdmin, QA Tester, Web Developer

September 2001 - June 2002 (10 months)

Managed IT systems and supported business operations for a surveyor-grade GPS company.

- Provided GPS hardware and software support to customers in person and remotely
- Maintained and improved the company web site, FTP server and office network
- Technologies: Perl, MySQL, HTML, JavaScript, GPS Hardware/Software

Delta Systems Inc.

System Administrator

June 1998 - September 1998 (4 months)

Accelerated a plan to replace 400+ PC workstations for Oregon Public Employee Retirement Plan IT office building and finished 6 weeks ahead of schedule.

- Streamlined the process by creating two workstation assembly lines for unboxing and configuring new PCs, and for wiping and packing old PCs.
- Installed and configured new PCs to state government standards, connected them to the network and installed custom software according to the role of each user.
- Refurbished the existing PCs by wiping, reformatting, installing operating systems and running test suites to verify they were ready for resale.
- Technologies: Microsoft Windows, Office, Access, Exchange, Cisco Networking

Education

Masters, Business Administration · (2004 - 2006)

Bachelor Science, Computer Science · (1999 - 2004)
